

Today is a hell of a time to start worrying about tomorrow.

If you're in the semiconductor business, you've got to anticipate the future. Or rapidly become part of the past.

At Nikon, we started worrying about tomorrow over 70 years ago.

So it's no wonder we were the first to develop high resolution semiconductor optics way back in the mid-1960s.

And no wonder that over 80% of all the steppers used in Japan are from Nikon.

And no wonder that we are the fastest growing I/C equipment manufacturer in the United States.

With a full U.S.-based support team in place. Available 24 hours a day, 7 days a week to provide field service, application expertise and training.

But that's just today.

Tomorrow is going to be full of all kinds of remarkable new technologies. Like X-ray and laser steppers.

But in order to push these and present technologies to their fullest capacity, we need a special relationship with your company.

A partnership where we can both openly share our plans for the future.

Such a relationship will allow us to tailor our equipment to meet your future specifications. And in a sense, we can share the cost of research and development.

Which can save you an enormous amount of money.

And give you a strategic advantage over your competition.

And frankly, it can do the same for us.

So pick up the phone and call us at (415) 952-8188. Or write Nikon Precision Inc. at 1051 Sneath Lane, San Bruno, CA 94066.

Ask about partnership.

It's a hell of a good way to do business.
